SUBJECT: Review of Air Monitoring and Health and Safety Plans for Montrose Chemical Company Superfund site.

FROM: Keith Takata *Keith Takata*  
Chief, Superfund Programs Branch (T-4)TO: Mike Stenburg  
Director, Air Toxics Office (A-1-1)

The Montrose Chemical Company facility in Torrance, California has been included on the latest update to the National Priorities List. Its ranking was based on historical aerial emissions of DDT (when it was an active facility), and the presently high on- and off-site DDT contaminated soils. Montrose would like to place an asphaltic cap over this site. We required them to provide, among other things, Air Monitoring and Health and Safety Plans.(attached)

I would appreciate review and comments of the attached plans by Kent Kitchingman. The comments are needed by December 10. Eric Koglin can provide any background information Kent may need to evaluate the plans. Thanks.
